

TRADITIONAL CORK FLOORING *POLYURETHANE FINISHED TILE*

TECHNICAL SUPPORT 800.345.6202

Traditional Cork Floor tiles are available pre-finished from the factory with durable water-based matte polyurethane. Polyurethane finish is superior to all other finishes available. Three layers of the polyurethane are applied making the flooring resistant to the scratching and wear common to other finishes. Additionally, the finish is applied using a method, which creates a surface that enhances and protects the natural beauty and texture of the cork.

Maintenance for Expanko's polyurethane finished cork flooring entails regular sweeping and damp mopping with a well wrung out damp mop and a mild solution of Ivory liquid soap and water. Regular buffing after cleaning will further enhance the look of the floor. Depending upon traffic and maintenance, re-application of the polyurethane is recommended when signs of wear appear (typically 4-8 years). The recoating process should be performed by an experienced professional, familiar with applying polyurethane. The process takes 4-5 hours and will be ready for foot traffic 4-6 hours after completion.

Polyurethane is the only cork floor finish available that is suitable for use in heavy commercial applications. Expanko has installations in libraries, churches, government buildings, corporations, retail stores and restaurants nationwide.

Traditional Cork Care and Maintenance Instructions (Document ID: 111) are available and should be followed.
