MATERIAL SAFETY DATA SHEET

TECHNICAL SUPPORT 800.345.6202

MSDS:

Expanko cork floor products are manufactured parts or products and are classified as “article” as defined by OSHA’s Hazard Determination Standard, 29 C. F. R. 1910.1200 Sec 6, (iv), (C). They have an end use dependent upon their shape or design and do not release or otherwise result in exposure to hazardous chemicals under normal conditions of use. MSDS sheets for individual products are not required.

SHELF LIFE:

It would be reasonable to expect general-purpose cork flooring materials to retain their original physical properties for at least 2 years if stored under reasonable, preserved ambient conditions. It is the policy of Expanko Resilient Flooring to suggest a 2-year “shelf life” for all materials. Extreme temperature and humidity storage conditions would be the key factors contributing to a stored material’s loss of properties. Expanko Resilient Flooring expects its material to last indefinitely, however, beyond the 2 year period; it is recommended to test the material to re-issue certification. Ultimate acceptance and functionality must always be determined for the application by the end user.
